AMENDMENTS TO THE CLAIMS

Presented below is a complete set of claims with current status indicators.

1. - 2. (canceled)

- 3. (currently amended) The method of claim [[1]] 7, wherein the atrial pacing occurs at a frequency that is at least double a respiratory frequency.
- 4. (currently amended) The method of claim [[1]] 7, wherein the atrial pacing occurs at a rate that varies with respect to an intrinsic rate.
- 5. (currently amended) The method of claim [[1]] 7, wherein the atrial pacing occurs at a rate that varies with respect to time.
 - 6. (canceled)
 - 7. (previously presented) A method comprising:

delivering one or more pacing pulses to an atrium;

determining one or more atrioventricular conduction interval times based on the one or more pacing pulses;

determining a respiratory characteristic based at least in part on the one or more atrioventricular conduction interval times; and

discriminating between obstructive apnea and central apnea.

- 8. (original) The method of claim 7, wherein the discriminating relies at least in part on a measurement related to chest movement.
 - 9. 24. (canceled)

25. (previously presented) An implantable cardiac stimulation system comprising:

sensing circuitry operative to sense atrial and ventricular events;

a processor connected to the sensing circuitry and operative to:

determine one or more atrioventricular conduction interval times based on the atrial and ventricular events;

determine a respiratory characteristic based at least in part on the one or more atrioventricular conduction interval times;

determine whether the respiratory characteristic indicates apnea; and discriminate between obstructive apnea and central apnea.

26. – 32. (canceled)
